

seems to be controversial (D.A. Turner, *pes. comm.*). Elsewhere in Kenya the race *teitensis* occurs in the Voi/Tsavo area, but it has not been reported for over fifteen years. The Mara birds would presumably be referable to *emini*.

Stripe-cheeked Greenbul *Andropadus milanjensis* in Mbulu District, northern Tanzania

One of us (RS) has had doubts about the identity of a bulbul he tape-recorded in the Marang Forest (3°30'S, 35°40'E), Mbulu, northern Tanzania in December 1978. FD-L has examined the tape, and finds it to be of the song of the Stripe-cheeked Greenbul *Andropadus milanjensis*.

Britton (1980) does not record this species from northern Tanzania west of Arusha National Park, in which general area Dowsett (1974) mentions specimens (race *striifacies*) from Monduli Mt. Marang Forest represents an extension westwards of known range, being about 130 km southwest of Monduli. Bennun *et al.* (1986) have recently captured this bulbul in Kenya, on Ol Doinyo Orok—a northward extension from the Kilimanjaro area of some 65 km. The Stripe-cheeked Greenbul may be uncommon in Mbulu, as Moreau & Sclater (1937) do not record it.
